VERIFORTE® Efficacy against SARS-CoV-2

If a disinfectant is labelled as "virucidal" according to EN 14476, this includes enveloped and non-enveloped viruses, and proof of efficacy against adenovirus, murine norovirus and poliovirus must be available. VERIFORTE® meets these criteria and is effective against enveloped and non-enveloped viruses. In order for a disinfectant to be advertised as "limited virucidal" according to EN 14476, evidence of the efficacy against the test viruses vaccinia virus (strain Elstree) and BVDV (bovine viral diarrhoea virus) must be available. Since the human coronavirus falls into this classification of viruses (enveloped viruses), the effectiveness of VERIFORTE® against human coronaviruses is thus confirmed.
